

Financial Copilot Enhancement Blueprint

Agent-Ready Execution Document • Version 1.0 • 28 May 2026

Objective

Improve Financial Copilot from a dashboard tool into a guided financial operating system that helps users decide, act, and stay consistent.

Primary Outcomes

- Increase weekly active usage via actionable alerts and next-step guidance.
- Improve trust with explicit freshness and source confidence indicators.
- Reduce decision friction with one-click scenarios and explainable AI recommendations.

Phase	Workstream	Agent Instructions
1	Stability and Trust	Implement session timeout UX, proactive stale-data warnings, and import reliability checks. Ship with tests for auth expiry and chat fallback behavior.
2	Decision Support	Add goals, scenario comparison, and risk alerts. Every recommendation must include data source and assumptions.
3	Operational Intelligence	Add monthly report export, scheduled reminders, and account-level data freshness dashboard. Prioritize low-friction weekly user habits.

Top Priority Features (Order of Implementation)

- 1) Goal tracking: emergency fund, bond payoff date, retirement target.
- 2) Cashflow and budgeting: monthly inflow/outflow with surplus signals.
- 3) Smart alerts: stale data, risk concentration, debt threshold breaches.
- 4) Scenario workspace: compare current vs what-if outcomes side by side.
- 5) Data confidence layer: source, age, and confidence badge per metric.
- 6) Monthly report export: PDF summary with actions and trend commentary.

Agent Instructions (Must Follow)

- Work in small PRs by phase; each PR must include test evidence.
- Do not merge UI changes without matching API/typing updates.
- Each feature requires acceptance criteria and rollback notes.
- Preserve backward compatibility for existing routes and stored data.
- Add clear empty/loading/error states in every new view.

Definition of Done

- Feature is visible in UI, wired to live data, and covered by tests.
- Build succeeds and no new lint/type errors are introduced.
- Tooltips, labels, and microcopy are reviewed for financial clarity.
- Product owner can demo the workflow end-to-end in under 3 minutes.
